

Bumble Verification Method

December 2022

Programs Needed

- 1) Download Faceapp On Phone and Get Premium (You Get 3 Free Day Trial)
- 2) Download Many-Cam Cracked → Ask me and I will send file
- 3) Create a Telegram Server, Be logged in on phone and computer.
- 4) ProxyEmpire Subscription
- 5) Batch Purifier --> <https://www.digitalconfidence.com/downloads.html>
- 6) IG Pic Downloader Chrome Extension --> <https://tinyurl.com/ycfnjt3n>
- 7) BlueStacks 5 --> <https://www.bluestacks.com/download.html>
- 8) Have Balance in Your Text-Verified (\$5 is enough) -->
<https://www.textverified.com>
- 9) Proxifier → <https://www.proxifier.com/download/>

Extra Tools:

Buy Gmail Accounts (\$0.28 Each) --> <https://tinyurl.com/2wkyzm82> (DON'T NEED)

Bumble APK → <https://m.apkpure.com/bumble-dating-friends-bizz/com.bumble.app>

Step 1

Go to IG, and find a model with lower than 5k followers that looks similar to the girl in your pack. Download 5 pictures off the profile. Clean the pictures with batch purifier and change filenames

Create a Fresh Bluestacks Instance, Open the emulator and install bumble (You can drag the apk from your desktop onto the emulator). Drag over the pictures that you purified onto the emulator, close bluestacks. *You don't want to install any apps with proxy running because it will waste your bandwidth.

Step 2

Add your proxy to proxifier

Step 3

Go to 'bluestacks multi-instance manager' and find the emulator you created, rename it to the location you're going to be using. Then create a desktop shortcut. Right-click the shortcut and open with proxifier.

Step 4

Take 2 Selfies on Your Phone, Go To FaceApp and Edit The Images You Just Took. Change Gender To Female, Edit Skin and Set To Freckles 3, Upload The Pictures To Your Telegram Server And Save To PC.

Step 5

Open ManyCam, Go To Resolution and Unselect All Of Them Except 1024x768 + 640x480 and Save. Leave Settings and Go To Video.

Step 6

Check GPS location on bluestacks, make sure it matches your IP location. (Button on the right side of the emulator)

Step 7

Open bumble, create an account with a phone number and verify it with text verified.

Select

Allow Location Services, Accept and Set name, add your two photos you made in faceapp, put any DOB (Above 18 of course), Gender Women, Date Mode, Interested in Men, Something Casual, Select 5 Interests, Skip recovery email at bottom left and finish account creation

Click Start Swiping, Go to profile at bottom left and click complete profile

Set Location and Hometown to the location your proxy is in.

Go to more about me and add all the options you want.

Add bio similar to

'Not looking for anything interesting'

DO NOT ADD SNAP YET

Save, and go like/dislike around 10 accounts

You will start getting likes.

Wait until you get forced verification, if it doesn't show up in roughly 20 minutes go

and verify account manually

Once you get the pose you have to complete, take a selfie on your phone doing the pose

(landscape) and edit it to female, freckles 3. Upload to your telegram server and add to

manycam on your desktop, this will show up on the emulator camera so you can

verify.

After you verify as yourself with the pictures from FaceApp;

Go to profile, turn 'best photos' off. Delete your second photo and upload the 5 photos

that you downloaded from IG. Rearrange the photos and put the picture you verified

as at the back (Majority of people won't scroll to your last picture, especially if you're

not matching)

After done add your snap to bio.

Snap/SC is a flagged word for new accounts so do

'Add (snapname)'

Go to the top right and set the location to 98 miles.

You will have a completely VERIFIED and LIVE bumble account, this might seem like

a hassle but after you do it a few times then you will easily get the hang of it.

Important Tips:

Always Take Your Verification Pictures Landscape

Create New Bluestacks Instance Every Account

Remove Some Hair With Eraser App in FaceApp If It's Interfering With Your

Hand Poses.

Turn Off 'Best Photos' When Uploading Fake Model Pics.

Get New Snapchat Username Every Account

Don't Have Underscores, Periods or Numbers In Your Snapchat Name

Always Match GPS location with IP location

If you want to use your multilogin browser, need to go to textverified and resurrect the phone you used to create the account, AFTER you fully verify the profile. Use the same proxy so you don't IP swap with a fresh account
